DATE MAILED: 03/12/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	<b>Application No.</b>	<b>Applicant(s)</b>	
	09/786,075	D'AGOSTINO ET AL.	
	<b>Examiner</b>	<b>Art Unit</b>	
	Ms. Arti Singh	1771	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 15-25 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 15-25 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

#### DETAILED ACTION

1. The Examiner has carefully considered Applicant's amendments and accompanying remarks filed on 12/03/2003. Applicant's filing of the RCE has also been accepted and entered. Applicant's cancellation of claims 1-14 and addition of new claims 15-25 have been entered. Despite these advances, the amendments are not found to patentably distinguish the claims over the prior art and do not overcome the rejection made in the previous office action.
2. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/15/2003 has been entered.

#### *Double Patenting*

3. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

Art Unit: 1771

4. Claims 15-25 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-3, 8,9,11-13, 16 and 17 of prior U.S. Patent No. 6,649,222. This is a double patenting rejection.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 15-17, and 19-25 are rejected under 35 USC 103 (a) as being unpatentable over USPN 4,632,842 issued to Karwoski et al.

7. Karwoski et al. disclose a variety of biomedical articles, having both flexible and hard surfaces such as vascular and prosthetic devices, shunts, catheters, etc. (column 4, lines 53-56). Additionally, at column 4, line 8 of the instant patent, it states that the tubes produced by their invention must resist radial collapse; therefore it must have some sort of strength and rigidity. Upon any of the aforesaid formed articles there is deposited a uniform coating or film of a fluoropolymer (column 4, lines 36-40), by means of a plasma glow discharge in the presence of fluorine containing gas (column 2, line 55). The preferred coatings of the invention have a water contact angle of greater than 120° (column 12, lines 1-24) and thus meet the limitations desired in claims 16, 17 and 25. With regard to the limitations sought in claim 22 and 23 where the article is formed prior to coating, this is exemplified in columns 6-8 where the steps are shown in formulating the tubes and then coating them. Karwoski et al. teach a hard surface substrate coated with a fluorocarbon coating/film having a water contact angle higher than 120°; and wherein the coating is obtained via plasma glow

Art Unit: 1771

discharge in the presence of fluorine containing gas they also teach the discharge to be between 200-500 millitorr (column 11) and the discharge to have a density between 0 and a 1000 watts (column 10). The only aspect that appears to differ from Applicant's limitations in the independent claims are the teaching of pulsating the plasma discharge. However, the Examiner takes the position that these limitations are considered product by process limitations, and that the claimed product that is the "treated substrate" appears to be or is similar to that of the prior art although produced by a slightly different method. The burden is shifted to Applicant to come forward with evidence establishing an unobvious difference between the claimed product and the prior art product (See *In re Marosi* 710 F. 2d 798, 802, 218 USPQ 289, 292 (Fed. Cir. 1983). Further, even though product-by-process claims are limited by and defined by the process, determination of the patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same or obvious from the product of the prior art, the claim is unpatentable even though the prior art was made by a different process. See *In re Thorpe*, 777 F. 2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985).

8. Claim 18 is rejected under 35 U.S.C. 103(a) as being unpatentable over USPN 4,632,842 issued to Karwoski et al. as applied to claims 15-17 and 19-25 above, and further in view of USPN 5,627,079 issued to Gardella, Jr. et al.

9. Karwoski et al teach what is set forth above but fail to explicitly teach the use of glass, metal or ceramics as their chosen substrate. Gardella, Jr. et al. disclose coating fibers, films and sheets consisting of either polymeric, ceramic, metallic or glass (column 8, lines 34) materials with a fluorocarbon coating (column 5, lines 22-45) used on a plethora of biomedical devices (column 6, lines 18-24). A person having ordinary skill in the art would have found it obvious at the time the invention was made to have employed the substrate of

Art Unit: 1771

Gardella Jr. et al. namely, a glass, ceramic or metallic layers , as the substrate in the invention of Karwoski et al., motivated by the desire to formulate a coated composite which is dimensionally stable and durable.

.....  
*Conclusion*

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. It should be noted that WO 97/42356 teaches all the product-by-process limitations required by Applicant's claims 15 and 24. A rejection could have been made however the Examiner feels that it would be redundant since the rejection set forth above is the best prior art.
